PROJECT ONLINE BACKUP TOOL

TOOL OVERVIEW

Out of the box, if you need to roll back a single project in Project Online, **ALL** projects must revert with it. This makes the Advisicon Project Backup Tool a critical addition to any Project Online environment. Save your sanity by backing up projects individually. By using this tool, you can pick and choose which project and version you want to restore.

No longer will your Project Managers lose data or have to take manual local backups of their project files. With automatic backups of Project Schedules, if there is an issue, you won't have to spend precious time rebuilding a schedule.

TECHNICAL DETAILS

The tool allows for user control of:

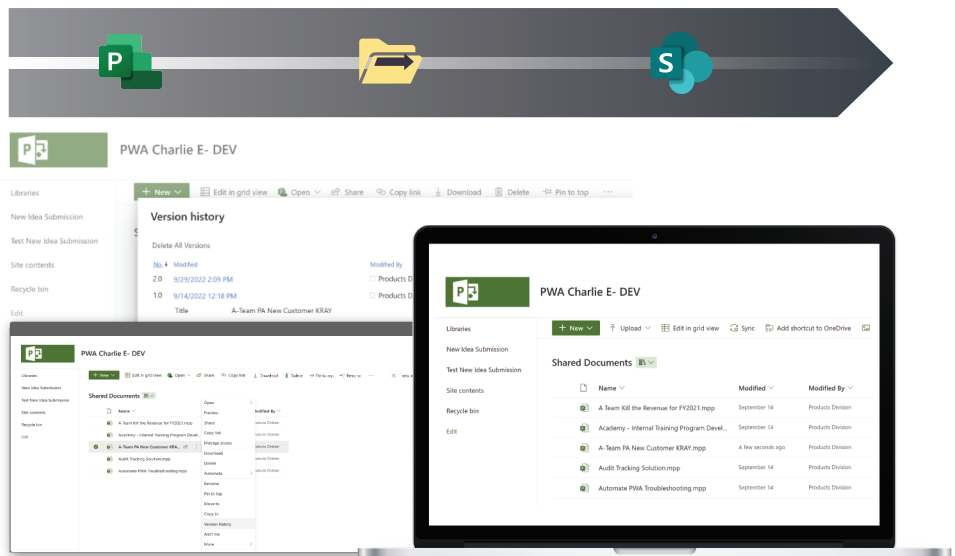

- How many backups are kept
- Retrieving a desired backup on a single project
- Reviewing what a schedule was at a certain point
- Replacing the current schedule with the backup

This solution is offered as a SaaS or self-host product. The self-host prerequisites are as follows:

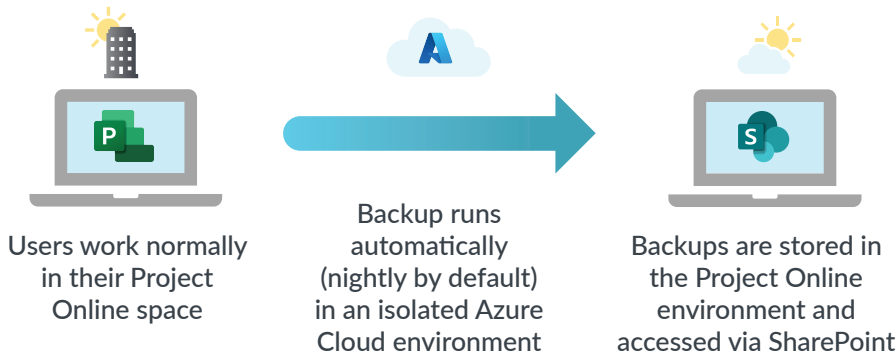

- Save location on the Project Online (or other SharePoint Library) or Network Share (if self-host)
- Always-on computer or VM running Windows XP or greater
- The Snapshot tool is based on .Net framework 4.7.1 and requires Project Desktop on the target machine.

WHO NEEDS THIS TOOL

Any person or company who would want to save and backup individual projects instead of the entirety of a Project site is an ideal candidate for this tool. If you've been avoiding upgrading to the more powerful Project Online due to the lack of backup capabilities, this tool gives you the access you need to level up.

WHAT'S THE DATA FLOW?

OUR PROCESS

1. Client meeting

We begin by meeting with you to understand your exact needs. Can you use the tool out-of-the-box?

CUSTOM NEED EXAMPLES:

- Saving the file somewhere other than a SharePoint folder
- Requiring an on-premise solution

For standard cloud-based circumstances, we only need to gather credentials for the tool to utilize.

2. Deployment

We deploy your backup instance, storing any credentials encrypted and secure in an Azure Key Vault.

3. Testing

Once the instance is deployed, we perform a manual run to establish your baseline backups. We ensure that all settings and functions are performing optimally, each and every time a backup happens. A backup schedule that suits you is put into place, and we confirm that all is running correctly.

4. Ongoing Monitoring

Daily backups are performed, and you now have SharePoint access to individual project .mpp files to restore at will! We monitor your backup jobs to ensure you're never at risk.

WHO WE ARE

Advisicon is a global project and portfolio management consulting, training, and custom application development company. We have 30+ years of experience serving clients in business, education, government, & nonprofit organizations.

MICROSOFT ENDORSED

The "A-Team" is renowned for innovative tech solutions. We're proud to be a Microsoft MVP and a member of the Microsoft Project Advisory Council.

FAQs

IS MY DATA SAFE?

Each customer's instance is deployed in an isolated system with all the security of Azure Cloud; data is only stored in your environment.

HOW OFTEN ARE MY PROJECTS BACKED UP?

Project backups are performed nightly. A new version is added for every project modified.

HOW FAR CAN I REGRESS A PROJECT'S HISTORY?

You may adjust the number of retained versions through built-in SharePoint functions.

HOW MUCH DOES IT COST?

\$199 a month per Project Online instance supports up to 250 projects. Have more projects? No problem, just call us!

I'M NOT SO "TECH-SAAVY"

This tool is easy to set up and simple to operate. We keep you out of the code & tricky back end of the tool, avoiding user error, giving your team straightforward access to Project files.
