

At Advisicon, our seasoned IT experts meticulously examine every aspect of your system, from settings to policies, ensuring that your environment meets the stringent security requirements for Copilot implementation. By proactively addressing any vulnerabilities or gaps, we pave the way for a smooth and secure integration, safeguarding your data from potential breaches and unauthorized access.

Our tailored audit services come in three tiers, each designed to cater to your specific needs. Beyond the standard guided audit, we offer additional services including remediation and security design, providing you with a comprehensive solution that not only saves you time and money but also ensures peace of mind throughout the implementation process.

AUDIT REPORT

Advisicon analyzes your enterprise environment and creates a comprehensive report. The document focuses on ensuring compliance, security, and proper management of Microsoft 365 apps and services.

M365 Apps for Enterprise

Assess if Intune is correctly used to ensure consistently updated app versions.

Entra ID Access Reviews

Review group memberships, enterprise applications, and role assignments.

Sensitivity Labels and Encryption

Consider the classification and protection of data based on its sensitivity level.

Data Classification in Microsoft Purview

Inspect predefined or custom rules for data assets.

Communication Compliance

Check sensitive data settings and Copilot monitoring policies.

Auditing and Content Search

Assess audit settings & vital searchability.

eDiscovery and Retention

Survey data life cycle policies.

DESIGN & FIXES

Security design and fixes provide assistance based on level of need and maturity in Azure or M365 security, addressing common security challenges, ultimately facilitating a holistic approach that integrates business, process, and technology for optimal outcomes. The goal is to get your environment as ready for deployment as possible.

COACHING BENEFITS

IT personnel benefit from coaching on Copilot implementation by gaining expert guidance, enhancing their skills, and receiving troubleshooting support, all tailored to their organization's needs.

Coaching sessions build confidence, providing personalized solutions that foster continuous improvement and enable IT teams to navigate complexities more effectively. This personalized time can streamline the deployment process, ensuring successful integration of Copilot while maximizing its potential.

WHY ADVISICON

Advisicon is an official Microsoft Solutions Partner. A globally trusted name in software implementation and project management, we've been helping organizations succeed for over 30 years. Our IT specialists excel in examining system intricacies, providing smart solutions, and meeting clients exactly where they're at.

PAIN POINTS AN AUDIT HELPS

IS OUR DATA SECURE?

The security audit ensures that your environment is secure and identifies areas that require bolstering, alleviating concerns about data breaches and unauthorized access. Addressing access and information sharing settings helps mitigate risk and establishes proper role-based boundaries prior to deployment.

IS OUR ENVIRONMENT READY FOR COPILOT?

Sure, you could buy Copilot tomorrow, but could you use it? From data labeling to device enrollment, an audit determines your technical environment's readiness and next steps to take.

HOW DO I FAST TRACK IMPLEMENTATION?

We align security configurations to fit your needs, cutting through the noise to set cybersecurity standards for your environment and data. Amidst Copilot's complexity, our experts streamline M365 setup for security and optimization.

OUR IT TEAM LACKS M365 SECURITY EXPERTISE.

With ongoing security updates, it's challenging to track integrated features for optimal secure use of Copilot. We provide expert guidance on configuring and leveraging out-of-the-box elements for safe use of this generative AI tool.
