

INSTALLATION MANUAL

Install LIME with a clear sky view, away from large electronics. It is waterproof but should be sheltered from direct spray and high-pressure water for best performance.

NOTE: For new LIME installs using existing sensor wires, Archipelago provides an M12 cable whip for connection to the updated housing. Use the included WAGO connectors to join power, ground, and signal wires. Strip 1/2" of insulation, lift the orange clip, insert the wire, then close the clip. Make all connections in a dry location, WAGO connectors are not waterproof.

Stripped Back Wire Insulation
