Objective : A position, as Journeyman Electrician, utilizing skills and knowledge in electrical and mechanical applications.

Experience:

-More than 15 years of experience in electrical construction consisting of oil field plants, hospital, parking lots, strip malls, warehouses, fire alarms, etc. As well as residential construction, new homes, condos and re-wiring of old homes.

-Testing and commissioning of electrical equipment.

-Experience in conduit bending, cable splicing, device installation, fiber optics, heat trace and cable tray installation.

-Experience in meter base and service entry installation, panel installation.

-Industrial gas plant and oilfield electrical installation, experience with PLCs and APU and UPS power systems.

-Substation and power stations installations and testing.

-Familiar with the use of precision measuring instruments.

-Skilled in blueprint and schematic reading, interpretation and development.

-Work directly with the general contractor and superintendents in configurations and upgrades; on most common changes in construction.

-Experienced on service calls, working with clients.

-Excellent independent working skills as well as a good team player.
